SUMMARY

AI Engineer with hands-on experience building and deploying production-ready AI applications, including multi-agent systems, RAG platforms, AI transcription solutions, and intelligent recommendation engines. Interest in global remote opportunities

PROJECTS

Multi-Agent System

- A multi-agent research system that autonomously searches, analyzes, validates, and compiles structured reports through coordinated AI agents.

RAG Document Intelligence Platform

- A document intelligence platform capable of processing 500+ page PDFs using semantic retrieval and vector search, cutting information lookup time from minutes to seconds.

Weather & News AI Agent

- An intelligent assistant providing real-time weather forecasts and the latest news through natural conversation, using tool-calling to dynamically fetch external data and maintain context across turns.

Mood-Based AI Recommendation System

- An AI-powered recommendation system that analyzes user mood and emotional sentiment to deliver personalized content recommendations — adapting suggestions to the user's current emotional state.
